

What is claimed is:

1. A liquid crystal display device, comprising:
an upper plate;
a lower plate;
a sealant formed along edges of the upper and lower plates
to join the upper plate with the lower plate;
a protrusion formed to separate the sealant from a picture
displaying area at an inner portion of the upper and lower
plates; and
a liquid crystal injected into the picture displaying area.

2. The liquid crystal display device according to claim 1,
wherein the sealant is formed on one of the upper and lower
plates and the protrusion is formed on the other one of the
upper and lower plates.

3. The liquid crystal display device according to claim 1,
wherein the sealant and the protrusion are formed on one of the
upper and lower plates.

4. The liquid crystal display device according to claim 1,
wherein the liquid crystal is injected using a liquid crystal
dispensing method.

5. A method of fabricating a liquid crystal display device, comprising the steps of:

providing an upper plate and a lower plate;

forming a protrusion between a sealing area provided with a sealant and a picture display area on one of the upper and lower plates;

forming the sealant on one of the upper and lower plates;

forming a liquid crystal layer on one of the upper and lower plates using a liquid crystal dispensing method; and

joining the upper plate with the lower plate.

6. The method according to claim 5, wherein the sealant is formed on one of the upper and lower plates and the protrusion is formed on the other one of the upper and lower plates.

7. The method as claimed in claim 5, wherein the sealant and the protrusion are formed on the same one of the upper and lower plates.
